第5問 次の英文を読んで、以下の問いに答えよ。

Sports for the disabled, with the Paralympic Games being the most well-known example, began as a result of reintroducing sports as part of the rehabilitation process for soldiers injured in World War II. Today, these sports are highly competitive, and athletes with different types and degrees of disability compete. Unlike general sports, which tend to exclude people based on height or physical size, sports for people with disabilities have modified rules, technologies, and concepts to make them more inclusive, while still accounting for a wide range of possible disabilities.

(①) The word itself does not tell us what part of the body is disabled, nor what kind of disability the person has, such as the difference between wheelchair users and amputees*. Also, even for people who are visually damaged, the degree of vision varies from person to person, from those who cannot see at all to those who can see unclear shapes and colors. Even though these people enjoy sports like the rest of us, sports authorities must consider each disability and make accommodations for things that a person would be unable to do due to their disability. Otherwise, their disabilities may determine their superiority or inferiority even before the game begins. Therefore, two concepts have been created for athletes with disabilities. The first is to modify tools and rules, and the second is to divide disabilities and compete fairly. (②)

Sports for people with disabilities with such ingenuity* are called adapted sports. As the name implies, adapted sports means sports that flexibly apply new tools or rules to adapt to the physical and mental condition of the person according to the type and degree of disability. On the other hand, traditional sports have pursued efficiency and

excellence by training people and adapting to existing tools and rules. However, in such a traditional way, there are people who cannot participate in sports and are left behind. ⁽²⁾

(③) It is the idea of adapted sports that has supported the development of sports for people with disabilities today. In order to improve the quality of human life and society, it is necessary for those without disabilities to be more aware of the difficulties faced by people with disabilities. Instead of asking people with disabilities to solve the difficulties they face in society, we should all realize that society may be responsible for those difficulties and think about what we can do as a society and act accordingly. With just one apostrophe, the meaning changes from “Impossible” to “I’m possible”. In this way, a small effort by each person can change society for the better. (④)
